

*Weekly Coal Production* provides timely information on coal: current statistics on the production of anthracite, bituminous coal, and lignite are provided each week; monthly, quarterly, and annual statistics on coal consumption, production, stocks, imports, and exports, and related supply and demand data are provided as they become available.

*Weekly Coal Production* is intended for use by the coal industry, the press, State and Federal Governments, policy makers, consumers, and analysts. Weekly coal production estimates are based on current trends in weekly rail carloadings of coal and current coal production trends as reported in *Coal Distribution* (Form EIA-6), monthly and quarterly coal production reports from State mine agencies, and *Coal Production Annual* (Form EIA-7a).

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or necessarily reflecting any policy position of the Department of Energy or any other organization.

# Weekly Coal Production

Energy Information Administration  
Washington, D.C.

Production for Week Ended:  
September 24, 1983

Released for Printing:  
September 30, 1983

## Highlights

Production of bituminous coal and lignite in the week ended September 24, 1983, as estimated by the Energy Information Administration, was 16,035,000 short tons. This was a decrease of 1,075,000 short tons, or 6.3 percent from production in the previous week. Production in the corresponding week of 1982 was only 11,695,000 short tons because of the strike by the Brotherhood of Locomotive Engineers from September 19 - September 22. Bituminous coal and lignite production from January 1 through September 24, 1983 totaled 555,089,000 short tons, 11.1 percent below production in the same period of 1982.

Production of Pennsylvania anthracite in the week ended September 24, 1983, as estimated by the Energy Information Administration, was 99,000 short tons, a decrease of 7,000 short tons or 6.6 percent from production in the previous week. Production in the corresponding week of 1982 was 93,000 short tons. Anthracite production from January 1 through September 24, 1983 totaled 3,257,000 short tons, 5.2 percent below production in the same period of 1982.

The Energy Information Administration, based on completion of its 1982 annual survey of mine operations (EIA-7A), has revised its preliminary estimate of U.S. Coal Production in 1982. Bituminous coal production (final) was revised from 829,211,000 short tons to 833,523,271 short tons. Anthracite production (final) was revised from 4,198,000 short tons to 4,588,330 short tons.
